<b>Delivery:</b>	On-Site or Virtual

## DESCRIPTION

Not sure which of our training courses is right for you? Build your own! Bluebeam Custom training is our most popular form of training offered. Our custom training sessions are designed to meet the specific needs of your organization. Students will achieve tailored learning objectives that are determined through a collaborative process.

## CONTENT

**Our process for creating custom training is as follows:**

1. Our instructor conducts an interview with your organization to determine the goals, needs, interests and timing of the class.
2. Our instructor develops a preliminary course content and sends it to your organization for review.
3. Our instructor makes any agreed-to modifications and submits the finalized course content.
4. Our instructor gathers and/or creates the necessary materials for the class.
5. If on-site: our instructor handles all necessary travel arrangements.
6. If on-site: our instructor arrives the day before training to familiarize themselves with the facility.
7. Our instructor conducts the training as planned.
8. Each student receives a survey asking for their review of the training class.
